Quick guide to Browser Mau app

The app was tested on Nexus 5 Emulator.

Start screen which shows my website and is also the home.

By clicking on the search icon, the user can search in Google or write an exact URL

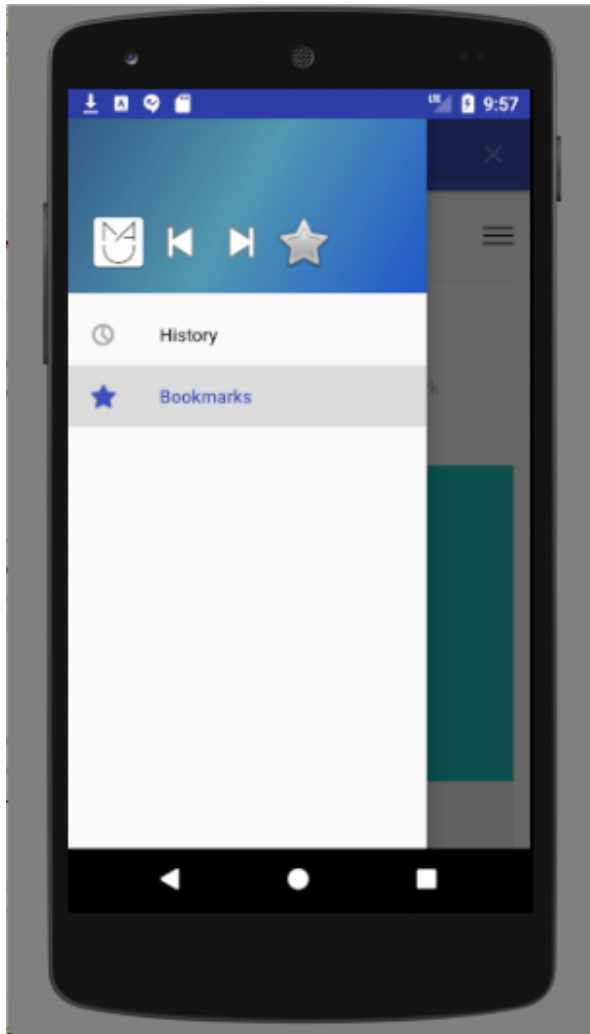

Drawer Menu, from left to right:

Home button, back and forward buttons, and add bookmark button.

The menu items show the History and Bookmarks respectively.

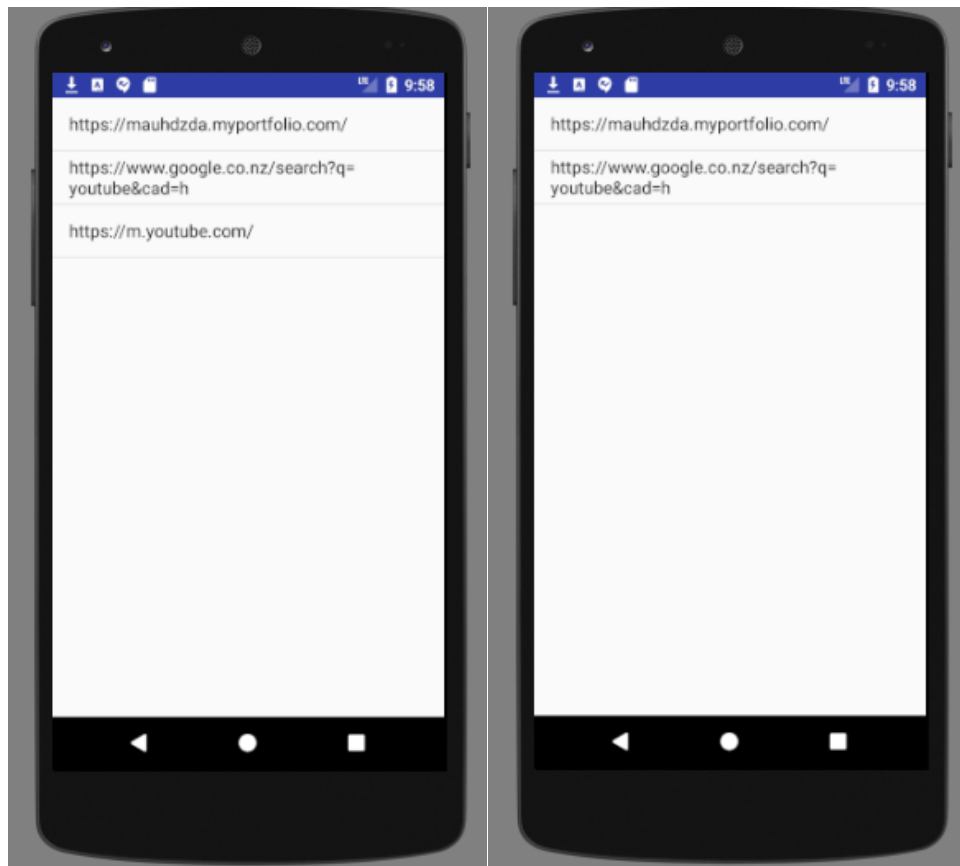

User can also go back using the normal back button of the phone.

On the left image you can see History and on the right Bookmarks.

The bookmarks should be stored even if the user closes the app (this function is not reliable yet, it is not recommended to trust). The history is only stored while running the session.

User can click on a link and will be redirected to website.

Future implementations:

History and Bookmarks permanent and reliable storage.

User able to remove history and bookmarks.

Getting website thumbnails to show in bookmarks.

Multi-tab browsing.

Drawer menu appearing on the left side of the screen, and on every activity.
